

Social Chat & Calls Platform - TODO List

Phase 1: Core Infrastructure & Authentication

- ☒ Setup database schema (users, messages, groups, channels, stories)
- ☒ Implement user registration with phone number
- ☒ Implement OTP verification system
- ☒ Setup JWT authentication
- ☒ Create user profile management API
- ☒ Implement profile picture upload to S3
- ☒ Setup error handling and logging

Phase 2: Real-time Messaging System

- ☒ Setup Socket.io server for real-time communication
- ☒ Implement one-to-one messaging
- ☒ Implement message status tracking (sent, delivered, read)
- ☒ Implement message editing
- ☒ Implement message deletion (for both parties)
- ☐ Implement message reactions/replies
- ☐ Implement disappearing messages (timer-based)
- ☐ Implement message forwarding
- ☐ Implement typing indicators
- ☒ Implement online/offline status
- ☒ Implement last seen timestamp

Phase 3: File & Media Handling

- ☐ Implement image upload and storage
- ☐ Implement video upload and storage
- ☐ Implement file upload (PDF, ZIP, APK, etc.)

- ☐ Implement audio message recording and playback
- ☐ Implement image compression before upload
- ☐ Implement video thumbnail generation
- ☐ Implement file download functionality
- ☐ Implement media gallery view

Phase 4: Groups & Channels

- ☐ Create group creation API
- ☐ Implement group member management (add/remove)
- ☐ Implement group roles (owner, admin, member)
- ☐ Implement group permissions
- ☐ Implement group messaging
- ☐ Implement group notifications
- ☐ Create channel creation API
- ☐ Implement channel posting (admin only)
- ☐ Implement channel permissions
- ☐ Implement channel subscriber management

Phase 5: Stories/Status System

- ☒ ~~Implement story creation~~
- ☒ ~~Implement story storage (24-hour expiration)~~
- ☒ ~~Implement story viewing~~
- ☒ ~~Implement story view tracking~~
- ☐ Implement story replies (private messages)
- ☒ ~~Implement story deletion~~
- ☐ Implement story navigation (swipe between stories)
- ☐ Implement story expiration cleanup

Phase 6: Calls System (WebRTC)

- ☒ Setup WebRTC signaling server
- ☒ Implement one-to-one voice calls
- ☒ Implement one-to-one video calls
- ☒ Implement call initiation and answering
- ☒ Implement call termination
- ☐ Implement audio muting
- ☐ Implement camera on/off
- ☐ Implement screen sharing
- ☐ Implement call quality adaptation
- ☒ Implement call history tracking
- ☐ Implement call notifications
- ☐ Implement group calls (multi-party WebRTC)

Phase 7: Voice Modification (Optional)

- ☐ Integrate voice synthesis API
- ☐ Implement voice change during calls (male/female/child)
- ☐ Implement sound effects
- ☐ Implement voice preview
- ☐ Test voice quality

Phase 8: Blocking & Reporting System

- ☐ Implement user blocking
- ☐ Implement unblocking
- ☐ Implement report creation
- ☐ Implement report categories (abuse, spam, inappropriate content)
- ☐ Implement automatic content moderation
- ☐ Implement report dashboard for admins
- ☐ Implement account suspension logic
- ☐ Implement repeat violation tracking

Phase 9: Privacy & Settings

- ☒ Implement privacy settings (who can message, who sees status)
- ☒ Implement last seen hiding
- ☒ Implement notification settings
- ☒ Implement dark/light mode
- ☒ Implement language switching (Arabic/English)
- ☒ Implement storage management
- ☒ Implement data export
- ☒ Implement account deletion

Phase 10: Admin Dashboard

- ☒ Create admin authentication
- ☒ Implement user management interface
- ☒ Implement user search and filtering
- ☒ Implement user blocking/unblocking
- ☒ Implement message monitoring
- ☐ Implement report management
- ☐ Implement content deletion
- ☒ Implement system statistics dashboard
- ☒ Implement activity logs
- ☐ Implement user analytics

Phase 11: Frontend - Authentication Screens

- ☒ Create login screen (phone number input)
- ☒ Create OTP verification screen
- ☒ Create profile setup screen
- ☒ Implement phone number validation
- ☒ Implement OTP input with auto-fill

- ✓ Implement profile picture upload UI

Phase 12: Frontend - Main Screens

- ✓ Create chats tab with conversation list
- ✓ Create chat detail screen with message display
- ✓ Create message input component
- ✓ Create message bubble component
- ✓ Create typing indicator UI
- ✓ Create online status indicator
- ✓ Create last seen display
- ✓ Create contacts tab
- ✓ Create profile tab
- ✓ Create settings screen

Phase 13: Frontend - Stories

- ✓ Create stories tab
- ✓ Create story viewer component
- ✓ Create story creation interface
- ✓ Create story navigation (swipe)
- ✓ Create view tracking UI
- ✓ Create story reply interface

Phase 14: Frontend - Calls

- ✓ Create calls tab with call history
- ✓ Create call initiation UI
- ✓ Create incoming call screen
- ✓ Create active call screen (voice)
- ✓ Create active call screen (video)
- ✓ Create call controls (mute, camera, etc.)

- ☒ Create call quality indicator
- ☒ Create call timer

Phase 15: Frontend - Groups & Channels

- ☒ Create group creation screen
- ☒ Create group info screen
- ☒ Create member management UI
- ☒ Create channel creation screen
- ☒ Create channel info screen
- ☒ Create permission management UI

Phase 16: Frontend - Admin Dashboard

- ☒ Create admin dashboard layout
- ☒ Create user management interface
- ☒ Create report management interface
- ☒ Create statistics dashboard
- ☒ Create activity logs view
- ☒ Create content moderation interface

Phase 17: Internationalization (i18n)

- ☒ Setup i18n framework
- ☒ Translate all UI strings to Arabic
- ☒ Translate all UI strings to English
- ☒ Implement RTL layout for Arabic
- ☐ Implement date/time localization
- ☐ Implement number localization
- ☐ Test RTL functionality

Phase 18: Testing & QA

- ☐ Unit tests for backend APIs
- ☐ Integration tests for messaging
- ☐ Integration tests for calls
- ☐ UI testing for all screens
- ☐ Performance testing
- ☐ Load testing
- ☐ Security testing
- ☐ Cross-platform testing (iOS, Android, Web)

Phase 19: Optimization & Polish

- ☐ Optimize database queries
- ☐ Optimize image loading and caching
- ☐ Optimize video streaming
- ☐ Implement lazy loading
- ☐ Implement pagination
- ☐ Reduce app bundle size
- ☐ Improve UI animations
- ☐ Improve error messages

Phase 20: Deployment & Release

- ☐ Setup CI/CD pipeline
- ☐ Build APK for Android
- ☐ Build IPA for iOS
- ☐ Deploy backend to production
- ☐ Setup monitoring and logging
- ☐ Create user documentation
- ☐ Create admin documentation
- ☐ Release app to stores

Current Status

- Project initialized with Expo mobile template
- Design document created
- Database schema planned
- Backend infrastructure ready
- Frontend scaffolding ready

Notes

- All features must support both Arabic and English
- All real-time features use Socket.io
- All calls use WebRTC technology
- All files stored in S3 (Manus Storage)
- Admin has full control over the system
- APK build will use Capacitor/Expo Build
